Essay.

There are two ways of human's identity movement: progressing or regressing. Of course, everyone wants to progress, so people search for better conditions to develop themselves. That's why a number of changing careers and places of residence increases.

To talk about Russia, the simplest example is to compare a town and a village. Nowadays urbanization grows up faster and faster, cities in the central part of the country become "millionaires"; but most of small villages are very close to extinction. There are no jobs and educational opportunities - so do people want to stay in a place with a lack of perspective? Migration to more developed regions is a natural and necessary process. Big cities need well-prepared employees. I'd rather say it's an advantage.

But the other side of places changing is immigration out of Russia. People still need easier ways to introduce themselves as skilled specialists. Probably it's the fault of the government or just national view and characteristics - anyway, country suffers in population. Immigration is positive for people but negative for the country.

I'm not going to stay in my hometown, as lots of people, I'll try to make a great career. I'm not so patriotic that country prosperity is the first aim for me. To sum up, I can't say that changing places of residence is a positive development only. Everything has good and bad sides.

$$\begin{array}{r} k_1 - 2 \\ k_2 - 2 \\ k_3 - 2 \\ k_4 - 2 \\ k_5 - 1 \\ \hline = 98 \end{array}$$
